Briefs on Projects Undertaken by Pelsups of Cohort 1

Governance

Mindful Skills and Competency Passport

MSCP is a digital professional identity and skills tracking system for GMC. It gives each person one lifelong profile that can be reused across recruitment , education and skilling platforms.

WHY IS MSCP NEEDED?

- The skills and experience are scattered across CVs, portals and paper certificates.
-
- Informal and vocational skills are recognised locally but invisible in formal systems.
-
- GMCA cannot clearly see where Bhutanese people stand or how local capability is changing.

Governance

GMC Labor Act and Zero Waste Management Policy

This project develops two core governance policies for GMC: the GMC Labor Act, which ensures fair, safe, and inclusive working conditions with clear standards for labor rights, workplace safety, and employee welfare; and the Zero Waste Management Policy, which promotes sustainable waste reduction through recycling, reuse, and environmentally responsible disposal. Together, these frameworks support a just labor environment and GMC's ambition to become a model zero-waste city.

Governance

GMC Education Model

This framework designs a world-class, mindfulness-based education ecosystem aligned with His Majesty's vision for GMC as a place where innovation, values, and environmental balance coexist.

It benchmarks global best practices, reviews international and national policies, and consults diverse stakeholders to propose standards for K–12 schools, colleges, and international campuses — potentially aligned with IB or Cambridge — while grounding them in GNH and mindfulness. It outlines governance structures, teacher development models, curriculum integration, and partnership strategies to position GMC as a regional hub for mindful, sustainable, and globally connected education.

Governance

Designing the Healthcare Policy, System Architecture, and Financing Model for GMC

This project develops a modern, inclusive, and digitally enabled healthcare ecosystem for GMC. One team designs policy and system architecture using WHO's Health System Building Blocks, outlining governance, service delivery, digital health integration, and workforce planning. The second team explores a sustainable financing model suited to GMC's diverse users, proposing a hybrid approach that protects free essential services for Bhutanese citizens while introducing insurance-based and cost-recovery mechanisms for non-citizens. The goal is a resilient, equitable, and financially sustainable system aligned with GMC's long-term vision.

Governance

Institute of Mindful Urban Innovation (IMUI)

This project develops a Mindfulness Framework to operationalize and measure GMC's vision across economic clusters. It integrates GNH indicators, Vajrayana mindfulness principles, international sustainability standards, and the Planetary Boundaries framework. Using the OECD Composite Indicator approach, it proposes a city-wide Mindfulness Dashboard displaying indicators at individual, social, institutional, city, and global levels — ensuring GMC's development remains balanced between progress, ecological limits, and human well-being.

Governance

Mindful Governance and Data Intelligence System (MG-DIS)

A unified governance platform structured around two layers: a Project Transparency Platform, where blockchain and smart contracts ensure real-time, tamper-proof tracking of projects and contracts, and a Smart Data Governance & Intelligence Layer, which transforms verified data into predictive insights for evidence-based decision-making. Contributing to the creation of GMC as a global economic hub, it strengthens coordination, transparency, accountability and citizen participation.

Governance

Centralised Smart Mobility System for GMC

This project designs a unified urban mobility system that integrates public transport, private services, EV fleets, and micro-mobility into a single digital platform. It addresses potential congestion, fragmentation, and emissions as GMC grows by offering seamless trip planning, real-time coordination, and eco-conscious movement across the city. The system aims to make mobility efficient, inclusive, and aligned with GMC's identity as a mindful and sustainable smart city.

Digital Guided Tour System

The Digital Guided Tour System is an immersive, self-paced cultural experience that transforms GMC into a living digital museum through adaptive storytelling. Designed as a location-aware, multimedia platform accessible via visitors' phones or rental devices, it enhances the visitor experience with curated audio narratives, short videos, and cultural insights from local artisans.

The system offers a practical alternative to Bhutan's mandatory traditional tour-guide model, which many visitors find restrictive or costly. By replacing static signboards and inconsistent interpretations with rich, contextual storytelling, the Digital Guided Tour System provides a more flexible, affordable, and engaging way to experience Bhutan's culture — without compromising authenticity or depth.

Governance

GMC Industrial Governance System (GIGS)

A governance-first digital platform designed to support planning, monitoring, and regulatory oversight of industries within Gelephu Mindfulness City. GIGS integrates industrial registry data, performance indicators, spatial intelligence, and blockchain-enabled product traceability into a single, secure system. By providing trusted, structured, and actionable industrial intelligence, GIGS enables proactive decision-making, strengthens compliance, and supports the development of a high-quality, investment-ready industrial ecosystem for GMC.

Governance

Land Tokenization: Policy Framework and Prototype

This project designs a policy framework and prototype for tokenizing land and development value in GMC. It proposes governance structures, regulatory mechanisms, and valuation models linking token value to GMC's progress in planning, infrastructure, and sustainability. It aims to create fair compensation for landowners while enabling tokens to serve as instruments of shared prosperity. The project also explores a secure digital platform for token issuance, trading, and performance monitoring.

OVERVIEW

Governance

Mindful Product Certification Initiative

The Made with Mindfulness Certification proposes a national certification and brand mark — 'Made with Mindfulness' — to verify that products and enterprises follow principles of mindfulness, cultural integrity, ethical labor, and environmental sustainability. It aims to diversify exports, elevate Bhutanese goods through a unique mindful value proposition, and strengthen national brand identity. Aligned with GNH and GMC's development goals, it supports sustainable growth and cultural preservation.

Governance

Digital Energy Grid and Beckn Protocol

This feasibility study explores integrating the Beckn Protocol with a Digital Energy Grid in GMC to modernize Bhutan's energy ecosystem. It evaluates the technical, regulatory, and economic feasibility of a decentralized, AI-enabled grid supporting real-time monitoring, renewable integration, peer-to-peer energy trading, automated transactions, and blockchain-secured operations. The findings will inform a full proposal that positions GMC — and Bhutan — as leaders in digital sustainability and resilient energy innovation.

Engineering

Mindful-Retrofit

This project proposes a practical retrofit framework to upgrade existing government and older buildings in Gelephu Mindfulness City so they meet future energy-efficiency and sustainability goals. Through feasibility studies, site assessments, and analysis of natural lighting, energy consumption, ventilation, and building services, it identifies opportunities to improve performance using solar systems, efficient cooling and heating, smart controls, and sustainable materials. The outcome will be adaptable retrofit designs that reduce energy use and costs, improve comfort, and support GMC's transition toward low-carbon, net-zero or net-positive buildings.

Pel-Zhing (Agri-tech powered by renewable energy)

Pel-Zhing proposes a solar-powered, digitally connected smart farm as a demonstration model for climate-smart agriculture in Bhutan. By integrating renewable energy, precision farming, IoT-based automation, and protected cultivation, the project aims to boost productivity, resource efficiency, and year-round crop production while reducing dependence on imported fruits and vegetables. It will also serve as a training and innovation hub for government, academia, and farmers — encouraging youth participation and supporting technology-driven agriculture.

Druk Digital Assets Ecosystem

Druk digital assets ecosystem transforms Bhutan's happiness philosophy into a functioning digital system where villagers earn tokens for verified community service or any work that contribute to the nation, which can be tradeable or spendable within themself and outside. Beyond creating economic incentives, the project generates the world's first real-time dataset on happiness-driven behavior, owned by communities and available for ethical research. Built on donated blockchain infrastructure, this community-owned model works offline and scales village-by-village, turning Bhutanese wisdom into both local wellbeing and global insight. We already got the validation node, providing the foundational blockchain infrastructure that will generate the revenue backing our entire token economy from day one.

High-Altitude Mindful Sports Academy(HAMSA)

HAMSA is a Bhutanese high-altitude sports academy inspired by His Majesty's vision for Gelephu Mindfulness City. With GMC as the mindfulness and innovation hub and Bumthang as the high-altitude training centre, it combines endurance training with mental discipline, meditation, and drug-free performance. The project aims to attract athletes and sports tourism, nurture a new generation of mindful champions, and position Bhutan as a global destination where altitude elevates performance and mindfulness shapes excellence.

Himalayan Green Blocks

The project aims to establish a sustainable manufacturing unit that produces concrete bricks using recovered multilayer plastic (MLP), a difficult-to-recycle waste commonly found in food and consumer packaging. By safely immobilizing shredded MLP from MRF facilities — led by Team Zero Waste GMC — into concrete bricks, the project transforms plastic waste into a durable and commercially viable construction material.
Beyond financial returns, the initiative delivers strong environmental and social benefits, including reduced landfill waste, lower demand for natural aggregates, decreased carbon emissions, and local job creation. This integrated approach to waste management and sustainable construction offers a scalable, circular-economy solution

The Globe

The Globe is envisioned as an immersive multi-cuisine restaurant in GMC where every dish and space is designed as a mindful experience. It blends global flavours with themed interiors, storytelling menus, and attentive service to nourish both body and mind, turning each meal into a small journey. Grounded in values of presence, cultural celebration, holistic hospitality, and sustainability, The Globe aims to be a sanctuary where guests slow down, savour, and connect through food that is prepared and served with intention.

Business

Druk Essence Coffee

The GMC Organic Coffee Factory aims to transform Gelephu into Bhutan's premier organic coffee hub by working directly with local farmers to cultivate Arabica and Robusta, and to process, roast, and package coffee within the city. Building on existing strengths — such as sapling supply to Bhutan Mountain Coffee — the project will create skilled jobs, increase farmers' incomes, and develop GMC Organic Coffee as a premium national brand. In doing so, it aspires to make GMC a centre for sustainable coffee that benefits communities, producers, and the country as a whole.

The Mindful Haven

Mindful Haven is a holistic wellness and care centre that serves both as a peaceful home for the elderly and a restorative retreat for people of all ages. Surrounded by nature, it blends traditional healing wisdom with modern wellness practices, offering care, mindfulness, and companionship in a calm, dignified setting. The project seeks to provide a compassionate environment where residents and guests can rest, reconnect with themselves, and experience genuine emotional and physical support.

Druk Digital Bridge (Easy Booking App)

Druk Digital Bridge proposes a user-friendly booking application for tourists and locals visiting GMC, allowing them to easily reserve hotels, restaurants, and related services in one place. By enabling visitors to plan and customise their trips according to their preferences, the app aims to improve the overall travel experience, support local businesses, and strengthen GMC's position as a well-organised, accessible, and welcoming destination.

RentMe

RentMe is a premium rental marketplace designed to make access to high-quality goods more affordable, sustainable, and convenient. The platform connects people who own valuable or underused items — such as traditional wear, designer accessories, electronics, furniture, and event equipment — with those who need them temporarily. By reducing unnecessary purchases and encouraging reuse, RentMe promotes mindful consumption and a circular economy, starting with a web platform and expanding to a mobile app and local store network to support trusted, community-based exchanges.

Dranshay Menjong

We are developing an AI, IoT-driven Controlled Environment Agriculture (CEA)-based, commercial-scale farm for culturing high-value medicinal mushrooms, Lion's Mane and Ganoderma, intended for the exponentially growing wellness and nutraceutical industry sector. Here, we merge the worldwide best and mindful CEA solutions currently in use, leveraging real-time environmental monitoring, accompanied by AI-driven climate modulation, thereby ensuring year-round, contamination-free, and consistent turnouts, which at present are not met by the local market. Our model is scalable, technology-led, and investment-ready, positioned at the intersection of AgriTech, health, and sustainability.

Action Water Park

Action Water Park is envisioned as a 10-acre, culturally rooted water park that offers relief from the region's heat while serving as a major recreational anchor for GMC. Combining world-class rides with Bhutanese architecture, symbolism, and storytelling, it will feature themed zones inspired by the Tashi Tagye and Thuenpa Puenzhi, accessible design for people with disabilities, and integrated transport elements such as cable cars and slides. The project aims to attract local and international visitors, support Bhutanese crafts and products through on-site retail and F&B, and operate as a financially sustainable, family-friendly destination that showcases Bhutan's creativity and hospitality.

Zhi-care (pad vending machine)

Zhi-care is a menstrual health initiative that installs smart sanitary pad vending machines in schools, colleges, offices, hospitals, and public spaces across Bhutan. Offering discreet, affordable, and 24/7 access via coin and QR-based payments, it reduces absenteeism, supports women and girls' participation in education and work, and helps break the stigma around menstruation. Designed as a social enterprise, Zhi-care aligns with GNH and key SDGs by improving health, dignity, and equality, while also creating local employment in installation, maintenance, and awareness activities.

Inclusive O Plush

This product and service will provide inclusive feelings in Gelephu Mindfulness City and Bhutan. The idea consists of two main agendas: Product and Services. The product is a plush that focuses on producing characters from Bhutanese oral stories, personal stories, and inclusive characters. This product aims to foster family, friends, and childhood memories and allows children to create memories by customizing their drawings into something tangible. Furthermore, the product includes the plush as a form of memory, a companion, and a simple assistive tool for people of
all walks of life.
