BRIEFS ON PROJECTS UNDERTAKEN BY PELSUPS OF COHORT 2

GOVERNANCE

Circular Vermicompist; DRUK MYCOVERT

Gelephu Mindfulness City (GMC) generates significant organic and livestock waste but lacks a city-scale processing system, leading to methane emissions, poor waste management, and loss of valuable nutrients. This project addresses the gap by using Sestima biodigesters to pre-process waste, followed by vermicomposting to produce nutrient-rich organic fertilizer. The fertilizer will support GMC's landscaping and green infrastructure, while reducing reliance on imported and chemical inputs. By combining waste management with a viable organic fertilizer business, the initiative creates green jobs, supports farmers, and builds a regenerative, sustainable urban ecosystem with long-term economic and environmental value.

GMC-ESR (Essential Services Registry)

Gelephu Mindfulness City (GMC) aims to be a well-planned, resilient, and inclusive urban center. However, as the city grows, access to verified essential service providers (such as electricians, plumbers, technicians, and emergency responders) can become fragmented, slow, and unreliable. Currently, there is no integrated system to plan, verify, and coordinate local service availability in real time. This creates challenges for residents, businesses, and city planners, especially during emergencies or high-demand situations. GMC-ESR addresses the need for a centralized, governance-aligned digital platform that enables better service planning, workforce visibility, and faster response—supporting GMC's vision of smart urban management and 10X Bhutan's goal of innovation-driven, inclusive development.

Mindful Construction Practices (MCP-GNH)

Mindful Construction Practices under GNH is a scalable training and certification model designed to improve safety and performance in Gelephu Mindfulness City's construction sector. It combines mandatory certification, mindfulness-based training, and real-time digital compliance to reduce risks, enhance productivity, and strengthen workforce resilience. Delivered through GMC Authority–approved providers with standardized quality frameworks, the initiative aims to position Gelephu as a global benchmark for safe, mindful construction while creating a replicable model for sustainable infrastructure and investment worldwide.

ENGINEERING

Green Energy R&D Centre

The challenge is to create a future-ready research and development centre aiming at a green energy ecosystem for Gelephu Mindfulness City that integrates renewable energy innovation, smart power systems, circular economy practices, and advanced digital technologies. Green Energy R&D Centre addresses gaps such as energy intermittency, inefficient infrastructure, lack of small-scale Peer-to-Peer energy trading, limited AI integration, weak innovation pipelines, and inadequate e-waste and waste-to-energy solutions, which will directly support GMC's one of the core industries, Green Energy and Tech Industries and Bhutan's 10X Roadmap ambition for innovation strategy in terms of building institutional capacity and talent pipelines.

ENGINEERING

Mindfulness Solar Photovoltaic (PV) Canopy

Gelephu Mindfulness City (GMC) aims to be a global model of mindfulness and sustainability, in terms of its infrastructure to be powered entirely by renewable energy such as hydro-power, solar PV farms, and wind mills, while fostering some of its core industries in Agri-Tech & Forestry, and Green Energy & Tech Industries. Central to this vision is the preservation of Bhutan's carbon-negative status and values of Gross National Happiness (GNH). While a large-scale Solar PV power plant will be a mandatory pillar for GMC's energy independence, traditional solar farm designs require extensive land footprints. In a city designed for mindfulness and ecological harmony, converting vast areas of land into 'energy-only' zones will create significant conflicts.

Smart Human Wildlife Co-existence

The Smart Human–Wildlife Coexistence project aims to reduce conflicts between humans and elephants, particularly in areas like Gelephu, where such encounters often lead to loss of life and property damage. The project proposes an AI-enabled early warning system that uses CCTV cameras and machine learning to detect elephant movements and analyze their behavior in real time. Based on this, the system sends early alerts to communities and, if necessary, activates humane deterrents such as sound, scent, or lighting to prevent harm. Overall, the initiative seeks to promote safe, sustainable, and peaceful coexistence between humans and wildlife through technology-driven solutions.

BUSINESS

Bhutan Biotech Center for Research and Innovation

The Bhutan Biotech Centre for Research and Innovation (BBCRI) is a strategic, “unicorn-track” national initiative designed to transform Bhutan from a conservation-focused nation into a global bio-discovery hub. Aligned with the 13th Five-Year Plan and grounded in Gross National Happiness, it integrates Himalayan ethno-pharmacology with advanced technologies such as generative AI, synthetic biology, and multi-omics to convert biodiversity into high-value, protectable intellectual property. Through a three-pillar framework—biotech R&D, digital bio-infrastructure (Sowa-Omics platform), and high-value commercialization—BBCRI aims to drive economic growth, strengthen health and agricultural resilience, protect traditional knowledge, and position Bhutan as a global leader in ethical, sustainable, and innovation-driven biotechnology.

Bhutan Mamicro Green Plant

Bhutan Mamicro Green Plant (BMMGP) is an innovative urban farming venture that specializes in the sustainable cultivation of premium, nutrient-dense microgreens using integrated hydroponic and aquaponic technologies. By leveraging soil-less growing environments and natural aquatic ecosystems, the project provides pesticide-free, hyper-local produce year- round while significantly reducing water consumption compared to traditional agriculture. Focused on bridging the gap between modern technology and natural flavor, BMMGP aims to transform the local food system by supplying high-end hotels, resort, and health-conscious consumers with organic superfoods, ultimately scaling from fresh harvests to specialized retail products like nutrient powders and wellness items.

Book & Go

Book & Go focuses on the hospitality and travel sector, bringing multiple services together on a single platform. It is designed to provide end-to-end booking solutions, including house rentals, hotel room bookings, and travel services such as taxi and bus reservations. In addition to travel and accommodation, the platform also offers logistics services, allowing users to transport household items, machinery, or any goods that need to be relocated. In brief, the project aims to combine accommodation, travel, and logistics services into one integrated system. While this is a high-level overview, the platform includes many more features and services in detail.

Credi-Able

Gelephu Mindfulness City aims to become a globally connected financial hub, but Bhutan currently lacks a standardized financial literacy framework and a centralized credit scoring system. Low financial literacy and the absence of standardized credit assessments increase borrowing risks, non-performing loans, and limit investor confidence. Credi-Able supports GMC's growth and ensures a resilient, inclusive, and internationally credible financial ecosystem, establishing an integrated financial literacy program alongside a modern, standardized credit scoring system aligned with Bhutanese values is essential.

dot.OFFER

dot.OFFER is a private workforce infrastructure platform designed for Gelephu Mindfulness City (GMC) and scalable across Bhutan under the 10xBhutan vision. Inspired by structured institutional talent systems such as the UN's INSPIRA, dot.OFFER functions as a system-level workforce management, deployment, and payment platform rather than a job portal or training programme. The pilot focuses on partnering the system with GMCA first. Operating as a private operator within a regulated framework, dot.OFFER complements public institutions by providing the operational backbone for formalising casual labour, improving execution efficiency, enhancing worker financial security, and supporting national talent retention.

Droenshey Dhumra

Droenshey Dhumra is a pioneering integrated floriculture and urban greening enterprise strategically located within the Gelephu Mindfulness City (GMC). The business is established to address a critical gap in the Bhutanese market: the overwhelming reliance on imported cut flowers and ornamental plants. By leveraging the favourable subtropical agro-climatic conditions of Gelephu, Droenshey Dhumra produces premium, locally grown varieties including roses, orchids, lilies, and climate-resilient Bougainvillea offering superior freshness and a significantly longer shelf life compared to imported alternatives. Beyond plant production, the business distinguishes itself through a multi-dimensional value proposition that includes professional landscaping services, event floral styling, and a unique "Floating Floral Museum" designed to integrate culture, education, and tourism.

Druk Basket

Druk Basket is an AI-powered digital agriculture and livestock platform designed to connect farmers directly to markets in Bhutan, particularly within Gelephu Mindfulness City. The project integrates technologies like AI, IoT, and blockchain to modernize traditional farming systems, enabling real-time market access, transparent supply chains, and smarter decision-making. It addresses key challenges in Bhutan's agricultural sector, including fragmented supply chains, low farmer incomes due to middlemen, high consumer prices, and lack of reliable market data. By enabling direct farmer-to-buyer transactions, providing real-time pricing insights, and ensuring traceability of produce, Druk Basket improves efficiency, increases farmer earnings, and delivers more affordable, high-quality products to consumers—while supporting sustainable growth and reducing import dependency.

Druk Energy Storage Solution

Druk Energy Storage Solutions (DESS) is an integrated energy initiative designed to strengthen Bhutan's energy security and support its transition to a solar-powered future. The project addresses key challenges including seasonal hydropower fluctuations, lack of battery storage infrastructure, and the emerging risk of EV battery waste. Through a full lifecycle model —covering design, procurement, installation, and maintenance— DESS delivers battery energy storage systems (BESS) while also promoting a circular economy by refurbishing and repurposing used EV batteries. The initiative supports grid stability, reduces import dependency, and aligns with Bhutan's carbon-negative and sustainability goals.

Shiitake Mushroom Hub; Druk MycoVert Solutions

Bhutan's mushroom sector has strong demand and favorable conditions but remains limited by labor-intensive cultivation methods, low scalability, and heavy reliance on imports (about 90% of supply). This project proposes establishing a state-of-the- art mushroom production and media center in Gelephu Mindfulness City (GMC), using advanced sawdust cultivation, climate control, and IoT automation to boost yield, quality, and efficiency. The hub will also support community out-growers through substrate supply and technology transfer. By leveraging GMC's infrastructure, the project aims to reduce imports, strengthen food security, and create export opportunities, while promoting a circular economy through the use of wood waste for high-value products.

Druk NextGen Smart Mega Farm

Bhutan has a high and growing demand for meat, yet relies heavily on imports, spending over Nu. 858 million annually. Druk NextGen Smart Mega Farm proposes an integrated commercial livestock farming and processing facility to substitute imports by producing diversified, value-added meat products for GMC and 10X Bhutan. Starting with broiler and pig farming—due to their quick returns and profitability—the project will expand into turkey, quail, and beef based on market demand. Designed as a climate-smart initiative, it will incorporate a biogas plant for efficient waste management while generating sustainable income and supporting domestic food production.

Druk Paws

In today's world, pet nutrition has become a major concern. Gone are the days when dogs and cats survived on leftover household food. Such practices, though common in the past, unknowingly caused digestive problems and long-term health complications. DrukPaws is a Bhutanese business that produces healthy and affordable pet food for dogs and cats using locally available ingredients. The project aims to reduce Bhutan's dependence on imported pet food and support local farmers. Modern lifestyles have transformed how we care for our furry companions. Responsible pet ownership now includes providing balanced, nutritious, and safe food. Globally recognized brands like Pedigree and Whiskas have proven the importance of scientifically prepared pet food—but these products are expensive and rely on imports.

Mindful Lift Farms; DRUK MYCOVERT

Mindful Lift Farms is Bhutan's first soil-based vertical farming system, specifically developed to support the resilient growth of Gelephu Mindfulness City (GMC). This innovative project utilizes a scalable 10-tower pilot system housed within a compact 1,200 m^2 solar-powered polycarbonate shed. The farm's mechanical heart consists of IP-safe rotating soil trays managed by Arduino IoT controls, ensuring that every plant receives balanced light exposure and precise climate management. By focusing on nutrient-dense leafy greens like lettuce and kale, the system produces 5–6.5 tons of premium vegetables annually for local residents, hotels, and institutions. Strategically, the initiative fosters self-reliance and food security by reducing Bhutan's 80% dependency on vegetable imports while creating dignified green jobs.

Project YALA: Bhutan's Digital Tourism Frontier

While tourism can generate economic opportunities, traditional models risk causing environmental degradation, overcrowding, and strain on cultural and natural resources. Additionally, many potential visitors are unable to experience GMC due to physical, financial, or geographical barriers. Currently, the absence of alternative tourism solutions limits GMC's ability to expand sustainably and engage a global audience. To address this, Project YALA proposes a virtual tourism platform that digitally showcases GMC's landscapes, culture, and experiences. This approach enables global access, generates revenue, and reduces environmental impact, supporting inclusive and sustainable tourism development.

SPIRITUALITY

Druk Lhazo Design & Services

A key challenge in Bhutanese construction is the disconnect between digital architectural designs and traditional painting execution. The lack of standardized, paint-ready design references creates confusion for artisans, leading to coordination issues, inconsistent quality, and frequent rework. As a result, the final output often does not align with the original design intent. To support the 10x Bhutan vision, there is a need for digitally integrated, standardized design frameworks that provide clear, practical guidance for on-site painters. By developing standardized digital design frameworks, Druk Lhazo bridges the gap, providing artisans with clear benchmarks that reduce ambiguity and manual error. Transitioning from traditional coordination to a digitally integrated system will enable the rapid, high-quality execution required to establish Gelephu as a world-class city that remains authentically Bhutanese. summarize this but dont miss the important points

SPIRITUALITY

Living Mindfulness System; LMS

As cities modernize and grow rapidly, everyday life becomes increasingly fast-paced, sensory-overloaded, and disconnected from inner awareness, even in places rooted in spiritual values. While Gelephu Mindfulness City aims to be a global model of mindful urban living, there is a challenge in translating mindfulness from philosophy and intention into a lived, daily experience for residents and visitors. The Living Mindfulness System addresses this gap by embedding mindfulness directly into public spaces through responsive living forms—allowing calm, awareness, and reflection to arise naturally without instruction, effort, or exclusion—aligning with GMC's vision and 10X Bhutan's goal of holistic, human-centered development.
